# AIRPANEL RECESS FOR LIGHTING UNIT

All buildings are different, all spaces require specific lighting requirements.

Light plays an essential role in our daily lives: It contributes to health, security and energy, it enhances our work conditions and improves our efficiency. In office or teaching environments, the dissemination of information mainly depends on vision. Light also participates in the attractiveness of spaces, in highlighting architectural decors, in restaurants, customer lobbies or even reception rooms. The lighting quality is a major factor.

Texdecor has designed and marketed a range of acoustic panels to be attached to ceilings or walls. To integrate them tastefully and efficiently to the existing décor, it has become obvious that the lighting units must be flush with these panels.

AirPanel acoustic panels provide two functional advantages: visual and acoustic comfort.

The renovation of any facility is a good opportunity not only to enhance its efficiency, its décor and its acoustic comfort but also its lighting.

Single-sided AirPanel 1200 x 1200 mm with suspension by cable gland

Single-sided AirPanel 1200 x 1200 mm with flush-mounted square spotlights

## RECESS FINISHES

The recess and the cable gland are made to measure in our production shop, enabling the integration of a large selection of units in the panel.

### FLUSH-MOUNTED SPOTLIGHT

**3 SHAPES :** square / rectangle / round

**LOCATION AND NUMBER OF LIGHTING UNITS :**

AirPanel offers you the possibility of flush-mounting several types of lighting on the same panel with a wide variety of layouts, depending on the selection guidelines defined by Texdecor.

### CABLE GLAND

**3 COLOURS**

Matching colour for the suspension cable and that of the cable gland with your fabrics and lighting unit.

white

black

steel

# SELECTION GUIDELINES

## 1 Select the shape

## 2 Select your colours in AirPanel Textile brochures

## 3 Define the type of lighting unit, its dimensions and its location

Flush mounted spotlight
